Cisco Meraki Wireless Products

Overview

Cisco solves customer business challenges by delivering architecture and services on the intelligent network platform, including the cloud. The acquisition of Meraki in December, 2012, addresses the rapidly recurring shift to cloud networking as a key part of Cisco's overall strategy to provide key services to their customers.

Meraki wireless products provide powerful and intuitive centralized management via the cloud, while eliminating the cost and complexity of traditional on-site wireless controllers. The Cisco Meraki cloud seamlessly manages campus-wide WiFi deployments and distributed multi-site networks with zero-touch access point providing, network-wide visibility and control, cloud-based RF optimization, seamless firmware updates and more. With an intuitive browser-based user interface, Meraki WLANs configure in minutes – not days or weeks.

NuWave Technology Partners is a privately held corporation founded in 2005. The company was formed to give organizations the ability to meet all of their technology needs with one vendor. NuWave has been partnering with Cisco for 7 years and supporting Meraki for the last 3 years. They have offices in Lansing, Southfield, Grand Rapids and Kalamazoo with support regions covering the entire State of Michigan. They provide helpdesk support five days a week during business hours with escalated support available 24/7 if needed. Meraki Cloud Wireless also comes with full software and hardware warranty and support via phone. If you have access to the Cloud Controller, then you also have access to full Meraki phone support for hardware and software issues.
