

HUBBLE'S HOT 100

Monday, April 4, 2016

7:00pm

EMU Professor Jesse Mason will show and discuss the latest images from the Hubble Space Telescope. Hubble's orbit outside the distortion of Earth's atmosphere allows

it to take extremely high resolution images with negligible background light. Weather permitting, we will then go outside to look at space from some telescopes set up outside the Warren library. Teens and adults are welcome.
